MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

APRIL 1936

TEMPERATURE

Mean temperatures for April were generally below normal throughout Canada from the Rocky Mountains eastward to the St. Lawrence River valley and the Lake St. John region in Quebec. Reports also indicate small negative departures from normal along the British Columbia coastal region about Prince Rupert. Southern British Columbia, the Atlantic Provinces and eastern and central Newfoundland had above normal temperatures.

On Vancouver Island excesses above normal of one to two degrees were reported. Along the coast of the mainland temperatures were normal to one degree below normal in the south and one to four degrees above normal in the north. In the southern interior river valleys excesses above normal of two to four degrees were reported.

Temperatures were two to six degrees below normal in the Peace River valley in Alberta and four to nine degrees in the Athabaska River valley. In the foothill region negative departures from normal of one to three degrees occurred. In the North Saskatchewan River valley there were deficiencies of three to five degrees and three to seven degrees in the Red Deer River valley. In the agricultural district about Calgary and southward to the International Boundary there were deficiencies of one to three degrees and four to five degrees about Medicine Hat.

In the extreme southwestern corner of Saskatchewan mean temperatures were normal to three degrees below normal and in the North and South Saskatchewan River valleys there were deficiencies of three to six degrees. Deficiencies of six to seven degrees occurred in the southeastern corner of the province while the district about Moose Jaw and Qu'Appelle and northward to Saskatoon and Humboldt had temperatures four to six degrees below normal. Reports indicate that in northern Saskatchewan mean temperatures were three to nine degrees below normal.

In the agricultural region of southern Manitoba there were negative departures from normal of six to nine degrees and five to ten degrees in the northern lake region.

Temperatures were seven to nine degrees below normal in Kenora, Rainy River and Thunder Bay districts of Ontario, four to five degrees below normal in Cochrane district and two to four degrees in Algoma and the northwest section of Sudbury district. In Timiskaming, Nipissing and the southeast part of Sudbury districts there were deficiencies of four to six degrees. In southern Ontario mean temperatures were generally three to five degrees below normal, the exception being in Haliburton and Renfrew Counties where there were deficiencies of six degrees and in Norfolk County and along the St. Lawrence River where there were deficits from normal of only two degrees.

Along the Ottawa and upper St. Lawrence River valleys in Quebec mean temperatures were two to three degrees below normal and normal to one degree below in the middle St. Lawrence River valley and southward to the International Boundary. In the Laurentian Hills there were deficiencies of one to four degrees while temperatures were generally one to three degrees above normal in the Lake St. John region. Along the lower St. Lawrence River mean temperatures were normal to two degrees above and two to three degrees above normal in the Gaspé peninsula.

Along the Bay of Fundy in New Brunswick mean temperatures were practically normal while the remainder of the province was generally one to two degrees above normal. Mean temperatures were practically normal along the Bay of Fundy, the Basin of Minas and Chignecto Bay in Nova Scotia but one to two degrees above normal along the Atlantic Coast. Reports indicate excesses of three or four degrees above normal temperature on Cape Breton Island and one degree on Prince Edward Island.

Western Newfoundland had mean temperatures two degrees below normal generally and available reports indicate excesses of two to four degrees in the southeastern part of the country.

Along Hudson Strait mean temperatures were normal at the eastern end and one degree above at the western entrance. Reports indicate that temperatures were well below normal on the western coast of Hudson Bay. Chesterfield reported a negative departure from normal of four degrees and Chuchill twelve degrees.

PRECIPITATION

Precipitation was generally 25% to 40% below normal on Vancouver Island, the exception being Estevan Point and Sooke both of which reported excesses above normal. Along the coast of the mainland there were deficiencies of about 10%. In the lower Fraser River valley precipitation was generally 5% below to 35% above normal and normal in the upper valley. In the interior river valleys precipitation was variable, ranging from 70% below to 100% above normal.

In the Peace River district of Alberta precipitation was heavy, with the total fall ranging from twice to more than three times the normal amount. Precipitation was generally normal to 40% below normal in the North Saskatchewan River valley. The agricultural region of the Red Deer and Bow River valleys had mostly 10% to 40% below normal precipitation although some stations reported excesses of 10% to 30%. Southern Alberta had deficiencies of 10% to 70% and 30% on the average.

Throughout Saskatchewan the April precipitation was well below normal except in the region about Kamsack where moderate excesses occurred. In both the North and South Saskatchewan River valleys deficiencies ranged from 20% to 80% and 60% generally. In the district from Swift Current and Moose Jaw southward to the International Boundary there were deficiencies of 30% to 70% and 45% on the average. The southwestern corner of the province had precipitation generally 45% below normal. In the region from Qu'Appelle and Regina northward to Yorkton and Humboldt deficiencies were of the order of 25%. In the Kamsack district the April precipitation was reported to be well above normal.

In the agricultural region of Manitoba precipitation was generally 50% to 80% below normal with the largest deficiencies occurring in the Souris River valley. In the northern lake region there were excesses above normal of 40% to 70%.

From the Lake of the Woods in Ontario eastward to Lake Nipigon precipitation was 15% to 75% below normal and 35% on the average. In Algoma and the eastern half of Thunder Bay district there were excesses of 35% to 100%. Cochrane, Timiskaming, Nipissing and Sudbury districts, Parry Sound and Muskoka counties reported deficiencies averaging 20% although small local excesses occurred at some stations. The remainder of southern Ontario had precipitation 30% in excess of normal on the average except in the Lake Erie counties where there were deficiencies of about 20%. April, 1936 was the cloudiest month since records of sunshine began at many points in Ontario and Quebec. Low sunshine records for the month were established at Haileybury, New Liskeard, Toronto, Oak Ridges, Lindsay, Kingston, St. Catharines and Woodstock, Ont. and at La Ferme, Que.

In the upper Ottawa River valley in Quebec small deficiencies were reported while in the lower Ottawa and Gatineau River valleys excesses of 20% to 70% and 40% on the average occurred. Precipitation was generally 25% to 70% above normal in the upper and middle St. Lawrence River valleys and southward to the International Boundary. Along the lower St. Lawrence River and in the Lake St. John district excesses of 20% to 60% occurred although small local deficiencies were reported about Lake St. John. In the Gaspé peninsula and on Anticosti Island deficiencies of about 25% occurred.

Precipitation was about 30% above normal in northern New Brunswick although Chatham reported a local deficiency of 25%. In central and southern New Brunswick excesses of 15% to 30% were generally reported. Along Chignecto Bay, the Basin of Minas and in the Annapolis Valley in Nova Scotia deficiencies of 10% or less were reported. The remainder of the province had excesses of 15% to 50% with the exception of Yarmouth which reported a deficit of 5%. On Prince Edward Island precipitation was about 50% above normal.

Available reports indicate that moderate excesses above normal precipitation occurred in Newfoundland, the exception being St. John which reported a small deficiency.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month.
